

## **"THE SURGERY OF SULCUS AND MOUCOSAL-BRIDGE OF THE VOCAL CORDS"**

**Bruno Galletti** - R.Bruno, L.Campisi, C.Cappuccio, N.Catalano, L.Russo

CASE REPORT: a female patient of 22 years old came to our observation and she was suffering from dysphonia for 6 years ago. she made in another hospital logopedic rehabilitation. we made diagnosis of moucosal-bridge on vocal cord left and sulcus of vocal cord right with larynxstroboscopia. it was an exceptional case . so we looked on literature to confirm about the rareness of the association of these two pathologies and also to decide the right treatment. at the end we decided to let her have on operation of phono-surgery.
